

Hello

Hello

We are an Irish company dedicated to creating the world's first ecologically safe computers: the iameco range

what we do

Over the past two decades, we've been working to create something truly unique:

a sustainable, ecological, high performance computer, free from the harmful chemicals and heavy metals built into most computers.

why we do it

We do this because we believe that it's better to build computers that don't harm the environment.

Our computers are designed to last about three times longer than average - up to ten years.

Because of their modular design, as new technology emerges, you can update your computer to keep it up to speed, rather than throw it away and buy a new one.

how we do it

We remove all the harmful materials, such as brominated flame retardants, PVCs, and heavy metals such as lead, cadmium and mercury that are used in regular computer manufacture.

Also, despite being equally powerful, iameco computers are designed to use a third less power than a mainstream computer.

This is how we lessen their impact on the environment.

our computers

iameco computers are not just good on the inside, they're pretty on the outside too.

Our computers are housed in beautifully designed wooden cases made of solid natural woods, including ash, maple and beech, all grown in sustainable forests. Each one is unique, and as the wood matures, they get better with age.

our computers

We understand that people need, fast, reliable computers, and so we have put just as much effort into ensuring that iameco computers are powerful enough for everything from e-mail and word processing to 3D gaming and design.

This is why our computers contain a fully upgradeable Intel motherboard.

But enough talk..

iam natural

The iameco 17" ultra slim high quality analogue flat screen monitor is embedded in real natural timber, an elegant combination of form, function and convenience. Advanced electronics ensure razor sharp screen images, while the slim, stylish and unique design delivers a high level of viewing flexibility while maximizing desktop space. Quality, exclusivity and reliability for the office or home.

iameco.com

iam friendly

The iameco solid ash, beech or sapele wood USB 3D optical mouse features advanced RF and optical technology. At 800 dpi resolution, it operates with impressive speed and accuracy. The environmental adjustment function in the circuit integration enables it to automatically adjust to different coloured desktop surfaces.

iameco.com

iam mercury free

The iameco wooden keyboard delivers more than just comfort and quality. Built from solid ash, beech or sapele, they add a vibrant new look to your desktop. The space-saving design offers a familiar, comfortable key layout. The keyboards have a USB interface and are available in a choice of different languages.

iameco.com

iam energy efficient

The iameco computer case is made from beautiful maple wood grown in sustainable forests. The housing is supported by two solid aluminium feet.

iam clean

The iameco computer is environmentally friendly, energy efficient and features a unique, natural wooden case. Our computers can be built to your individual specifications and our modular design allows you to update your computer for a much greater life span.

iameco.com

support

We provide comprehensive, personal support to all our customers.

standards

We are a certified ISO 14001 and ISO 9001 company staffed by qualified engineers.

how to find us

To get in contact with us, please call: 01-4930514
