

Appendix III.1

The water quality of 449 lakes examined during the period 2004- 2006. The designated trophic status of each lake was determined using the classification scheme in Table XX. The surface area and established beneficial uses of each lake are given and recent changes in the water quality, if any, are indicated as well as the overall trophic status for the entire period. Lakes in the WFD monitoring programme and those with Zebra Mussel present are indicated respectively by WFD and Z. In the case of lakes in Gaeltacht areas names are in the original Gaelic form with the anglicised form in parentheses underneath. O:Oligotrophic, M: Mesotrophic, m-E: Moderately eutrophic, s-E: Strongly eutrophic, h-E: Highly eutrophic, H: Hypertrophic.
