

Site Visit Report

Under the European Union (Drinking Water) Regulations 2014 as amended, the Environmental Protection Agency is the supervisory authority in relation to Irish Water and its role in the provision of public water supplies. This Audit was carried out to assess the performance of Irish Water in providing clean and wholesome water to the visited public supply.

The audit process is a sample on a given date of the facility's operation. Where a finding against a particular issue has been reported this should not be construed to mean that this issue is fully addressed.

Water Supply Zone			
Name of Installation	Kingscourt PWS		
Organisation	Irish Water		
Scheme Code	0200PUB0114		
County	Cavan		
Site Visit Reference No.	SV25553		

Report Detail		
Issue Date	10/06/2022	
Prepared By	Criona Doyle	

Site Visit Detail			
Date Of Inspection	19/05/2022	Announced	Yes
Time In	12:30	Time Out	13:30
EPA Inspector(s) Additional Visitors	Criona Doyle Lorcan Farrell; Patricia Mallen; Denise McElvaney.		
Company Personnel	Irish Water: Peter Gallagher; Yvonne McMonagle. Cavan County Council (acting under service level agreement to Irish Water): John McDonald; Leon Conoly; Ciaran Fitzgerald; Gary Boyd.		

> Summary of Key Findings

- (1) Disinfection consists of chlorination and ultraviolet (UV) treatment. The audit found that the disinfection system was operating satisfactorily during the inspection.
- (2) The frequency of residual chlorine monitoring in the network should be increased.

> Introduction

The Kingscourt Public Water Supply (PWS) produces approximately 737m3/d of water serving a population of 3,005 (Eden figures). The audit focused on the disinfection system at the Kingscourt (Lisanisky) WTP. This site was surveyed under Irish Water's Disinfection Programme but was not upgraded under the programme.

Supply Zones Areas Inspected

This audit assessed the chlorination and UV disinfection system at the Kingscourt (Lisanisky) WTP.

1. Disinfection Programme Audits 2022

	Answer
Is chlorination used for primary disinfection?	No
	Answer
Can you establish what type of chlorine disinfectant is used?	Yes
	Answer
Are there duty and standby chlorine dosing pumps in place?	Yes
	Answer
Is there automatic switchover in the event of failure of one of the chlorine dosing pumps?	g Yes
	Answer
Is the chlorine dosing rate flow proportional?	Yes
	A
	Answer
Is the chlorine dosing rate fixed?	Not Applicable
	Answer
Can IW / LA confirm the target residual chlorine level for the final water leaving plant?	the Yes
	_
	Answer
Is there a continuous residual chlorine monitor on the final water?	Yes
	Answer
Can data trends from the online residual monitor be viewed on site?	Yes
	Answer
	Allswei

Is there automatic shutdown of the supply in the event of the chlorine level dropping below the low chlorine alarm setting or rising above the high chlorine alarm setting? Answe Are service due / monitoring instrument calibration dates for the chlorine monitors within date? Answe Is the site specific contact time being achieved ? If answer is NO, proceed to question 15 Answe Is the minimum effective contact time of 15 mg. min/l being achieved? Not Ap Answe Is the residual chlorine level ≥ 0.1 mg/l at the extremity of the distribution network? Comment Monitoring of residual chlorine levels is undertaken weekly at network extremities. Answe Is UV treatment used for primary disinfection? Y Answe	Answer

Is the site specific contact time being achieved? If answer is NO, proceed to question 15 Answe Is the minimum effective contact time of 15 mg. min/l being achieved? Not Ap Answe Is the residual chlorine level ≥ 0.1 mg/l at the extremity of the distribution Y network? Comment Monitoring of residual chlorine levels is undertaken weekly at network extremities. Answe Is UV treatment used for primary disinfection? Y Answe	the chlorine monitors Yes	
Is the minimum effective contact time of 15 mg. min/l being achieved? Not Apart	Answer	
Is the minimum effective contact time of 15 mg. min/l being achieved? Answe Is the residual chlorine level ≥ 0.1 mg/l at the extremity of the distribution Ynetwork? Comment Monitoring of residual chlorine levels is undertaken weekly at network extremities. Answe Is UV treatment used for primary disinfection? Y	s NO, proceed to Not Applicable	Is the site specific contact time being achieved? If answe question 15
Solution Solution	Answer	
Is the residual chlorine level ≥ 0.1 mg/l at the extremity of the distribution network? Comment Monitoring of residual chlorine levels is undertaken weekly at network extremities. Answe Is UV treatment used for primary disinfection? Y	achieved? Not Applicable	Is the minimum effective contact time of 15 mg. min/l beir
Comment Monitoring of residual chlorine levels is undertaken weekly at network extremities. Answe Is UV treatment used for primary disinfection? Y	Answer	
Monitoring of residual chlorine levels is undertaken weekly at network extremities. Answe Is UV treatment used for primary disinfection? Y	ne distribution Yes	
Is UV treatment used for primary disinfection? Answe		Comment
Is UV treatment used for primary disinfection? Y Answe	at network extremities.	Monitoring of residual chlorine levels is undertaken week
Answe	Answer	
	Yes	Is UV treatment used for primary disinfection?
Are there duty and standby UV units in operation?	Answer	
The there daily and standary of anime in operation.	Yes	Are there duty and standby UV units in operation?
	Answer	

19	Is there automatic switchover between the duty and standby UV units in the event of failure of the duty unit?	Yes
		Answer
0	Is there automatic plant shutdown in the event of UV units failing or operating outside of their validated range?	Yes
		Answer
1	Is there continuous monitoring of the UV units to verify operation within validation range at all times?	Yes
		Anouser
2	Can data trends from the online UV monitor(s) be viewed on-site?	Answer Yes
	Can data trends from the orinine ov monitor(s) be viewed on-site:	
		Answer
3	Is there an alarm response procedure available on site for responding to UV alarms ?	Yes
		Answer
,	Are service due / monitoring instrument calibration dates for the UV units within date?	Yes
		Answer
;	Is a copy of the validation certificate for the UV disinfection system available on site ?	Yes
		Answer
;	Is there a plate on the UV unit with the validation criteria?	Yes
		Answer
7	Did IW confirm that the UV units are operating within the validation range?	Yes

		Answer		
1.28	Have all relevant staff received training on the disinfection upgrades?	Not Applicable		
	Comment			
	Not applicable as upgrade works have not been undertaken.			

Recommendations

Subject	Kingscourt PWS - Disinfection Audit	Due Date	11/07/2022	
Action Text				
	Recommendation			
	Irish Water is responsible for ensuring a safe and secure supply of drinking water. To address these issues, Irish Water should implement the following recommendation without delay.			
	1. Irish Water should ensure monitoring of residual chlorine is undertaken several times a week at different points of the network to include the network extremities.			
	Follow-Up Actions required by Irish Water			
	During the audit, Irish Water representatives were advised of the audit findings and that action must be taken as a priority by Irish Water to address the issues raised.			
	This report has been reviewed and approved by Regina Campbell, Drinking Water Team Leader.			
	Irish Water should submit a report to the Agency on or before 11/07/22 detailing how it has dealt with the issues of concern identified during this audit.			
	The report should include details on the action taken and planned to address the various recommendations, including time frame for commencement and completion of any planned work.			
	The EPA also advises that the findings and recommendations from this audit report should, where relevant, be addressed at all other treatment plants operated and managed by Irish Water.			
	Please quote the Compliance Plan DW20220051 in any future correspondence in relation to this Report.
