1. Measurement survey characteristics

Measurement date:	3 rd March 2022
Measurement time:	11:30 am – 16:00 pm
Measurement point & location:	Main Street, Carrigaline, Co Cork
GPS coordinates:	51°48'48.3" N; 8°23'31.7" W
Survey staff:	Javier Vila, Michael Murray
Purpose of the survey:	<p>1) To carry out measurements of radiofrequency (RF) electromagnetic fields (EMF) at a location within Carrigaline town with high daytime population.</p> <p>2) To determine typical RF EMF levels and compare them with relevant exposure limits recommended by the International Commission on Non-Ionizing Radiation Protection (ICNIRP).</p> <p>This survey is part of the EPA’s national EMF monitoring programme (see reference EPA 2020 for more details).</p>
Measurement point description:	Outdoor public space typically busy due to available amenities in the area.

2. Summary of survey results

Measurement result:	The average total RF level measured was 1.14 V/m. This value is below ICNIRP’s recommended exposure limits of 28 V/m for radiofrequencies < 400 MHz and 61 V/m for radiofrequencies > 2 GHz.
Measured RF sources/signals:	TETRA, PMR, 2G (GSM), 3G (UMTS), 4G (LTE), Wi-Fi 2.4GHz, 5G (NR-3.6GHz)
Number of nearby telecommunication sites:	1 nearby site (see map on page 4 for details). This information was obtained from the ComReg’s website https://siteviewer.comreg.ie/ (November 2020)

3. Measurement methodology and results

Broadband and frequency-selective EMF measurements were performed at a location in Carrigaline town centre (Main Street) known to have a high daytime population. The charts and tables below contain the summary results for total RF electric fields (Table 1 & Figure 1) and frequency-specific RF electric fields (Table 2 & Figure 2) for the selected location and time of the day using various configurations, including the use of a 5G-enabled mobile phone handset in the proximity of the measurement point while streaming video to identify any potential nearby 5G signals.

Figure 1. Total RF electric field levels at measurement point using two broadband probes.

Note: This graph represents total average (rms) RF electric fields measured for 6 minutes (360 seconds) using two different RF probes as described on the graph legend. Total RF fields include exposures from all RF sources (signals) depending on the probe(s) used. ICNIRP reference levels between 400 MHz and 2 GHz are frequency specific (see EC 1999 for details).

Table 1. Summary of total RF fields at measurement point using two broadband probes.

Probe Frequency Range	Average electric field (V/m)	Average power density (W/m ²)	Maximum electric field (V/m)	Maximum power density (W/m ²)	ICNIRP reference level (V/m)	ICNIRP reference level (W/m ²)
100 kHz - 6 GHz	1.14	0.003	2.14	0.012	28*	2*
100 MHz - 90 GHz	1.12	0.003	1.98	0.010	28*	2*

Note: RF electric field data obtained with Narda NBM-550 meter with EF0691 and EF9091 probes. *Strictest ICNIRP reference levels for the entire RF frequency range. These data have a maximum overall uncertainty around ±41% (±3 dB).

Figure 2. Frequency-specific radiofrequency electric field level by telecommunication signal

Note: Average RF electric field data above the noise threshold for 6-min average (rms) obtained with SRM-3006 spectrum analyser using 3501/03 and 3502/01 probes. ^aICNIRP reference level for each corresponding frequency range. 2G: GSM; 3G: UMTS; 4G: LTE; DL: Downlink; UL: Uplink; PMR: Professional Mobile Radio; NR: New Radio.

Table 2. Measured average and maximum frequency-specific field level by RF source/signal.

RF Source / Telecommunication Signal	Frequency Range (MHz)	Maximum Electric Field/ Power Density		Average Electric Field/ Power Density		ICNIRP Reference Level ^b	
		(V/m)	(W/m ²)	(V/m)	(W/m ²)	(V/m)	(W/m ²)
TETRA (DL)	390-400	0.16	0.00007	0.12	0.00004	28.0	2.0
PMR	450-470	0.01	0.000001	0.01	0.0000004	29.5	2.3
4G (700, DL)	758-788	0.83	0.002	0.47	0.0006	38.2	3.9
4G (800, DL)	791-821	0.90	0.002	0.52	0.0007	39	4.0
2G-3G (900, DL)	925-960	0.51	0.0007	0.39	0.0004	42.2	4.7
2G-4G (1800, DL)	1805-1880	1.01	0.003	0.59	0.0009	59.0	9.2
3G-4G (2.1, DL)	2110-2170	1.45	0.006	0.86	0.002	61	10
Wi-Fi 2.4GHz	2400-2483.5	0.05	0.000007	0.03	0.000003	61	10
5G (NR-3.6GHz)	3410-3750	0.36	0.0003	0.18	0.00008	61	10

Note: RF electric field data above the equipment noise threshold for 6-min average (rms) obtained with SRM-3006 meter using 3501/03 and 3502/01 probes. These data have a maximum overall uncertainty around $\pm 41\%$ (± 3 dB). ^bICNIRP reference level for each corresponding frequency range. 2G: GSM; 3G: UMTS; 4G: LTE; DL: Downlink; UL: Uplink; PMR: Professional Mobile Radio; NR: New Radio.

5. Conclusion – Total & Frequency-Specific RF field levels

Measured (average and maximum) total RF electric field levels (Figure 1 & Table 1) were below the strictest ICNIRP recommended exposure limit for the entire RF frequency range (i.e. 28 V/m). The average total RF level was 1.14 V/m. Measured (average and maximum) frequency-specific RF electric field levels for all detected signals (Figure 2 & Table 2) were low (< 2 V/m). All the signals measured were below the corresponding ICNIRP recommended exposure limits of 28 V/m for radiofrequencies < 400 MHz and 61 V/m for radiofrequencies > 2 GHz. The highest RF electric field level at the point of measurement (1.45 V/m) is likely to correspond to the emission (downlink) from nearby 3G-4G (2.1 GHz) antennas. 5G signals were detected at the point of measurement with a maximum level of 0.36 V/m (without data traffic).

6. Map of measurement point and nearby telecommunication sites (masts)

7. Photo of measurement point and nearby (line-of-sight) telecommunication sites (masts)

Appendix

A1. Equipment characteristics and calibration

The following EMF measurement equipment was used:

- Narda SRM-3006 frequency-selective meter and spectrum analyser.
- Narda NBM-550 wideband survey meter.
- Narda probes covering a frequency range between 100 kHz and 90 GHz.
- All equipment was calibrated in December 2021.
